Artificial Intelligence Book

Artificial Intelligence Book

Chapter 1: Introduction

Artificial Intelligence is transforming industries such as healthcare, finance, education, and transportation.

Chapter 2: Machine Learning

Machine Learning algorithms include:

- Linear Regression
- Logistic Regression
- Decision Trees
- Random Forest
- Support Vector Machines

Chapter 3: Deep Learning

Deep Learning uses Artificial Neural Networks to solve complex tasks such as image recognition, speech recognition, and language translation.

Chapter 4: Retrieval-Augmented Generation

RAG systems first retrieve relevant documents from a vector database using semantic search. The retrieved context is then provided to a Large Language Model (LLM) to generate accurate and grounded answers.
